

Amendment and Response under 37 CFR §1.116

Page 2 of 12

Applicant(s): Nancy D. HANSON et al.

Serial No.: 09/814,257

Filed: 21 March 2001

For: PRIMERS FOR USE IN DETECTING BETA-LACTAMASES

Amendments to the Claims

This listing of claims replaces all prior versions, and listings, of claims in the above-identified application:

Listing of Claims

- 1-11. (Canceled)
12. (Previously presented) A primer selected from the group of:
5' - CGT CGC TCA CCA TAT CTC CC - 3' (SEQ ID NO:34);
5' - CCT CTC GTG CTT TAG ACC CG - 3' (SEQ ID NO:35); and full-length complements thereof.
13. (Previously presented) A primer selected from the group of:
5' - CGC TGG GAA ACC TAT TCG G - 3' (SEQ ID NO:36);
5' - CTG CCA TCC AGT TTC TTC GGG - 3' (SEQ ID NO:37); and full-length complements thereof.
14. (Previously presented) A primer selected from the group of:
5' - GGT GGC ATT GAC AAA TTC TGG - 3' (SEQ ID NO:38);
5' - CCC ACC ATG CGA CAC CAG - 3' (SEQ ID NO:39); and full-length complements thereof.
15. (Previously presented) A primer selected from the group of:
5' - TGT GCA ACG CAA ATG GCA C - 3' (SEQ ID NO:40);
5' - CGA CCC CAA GTT TCC TGT AAG TG - 3' (SEQ ID NO:41); and full-length complements thereof.

Serial No.: 09/814,257

Filed: 21 March 2001

For: PRIMERS FOR USE IN DETECTING BETA-LACTAMASES

16. (Previously presented) A primer selected from the group of:

5' - AGG CAC GAT AGT TGT GGC AGA C - 3' (SEQ ID NO:42);

5' - CAC TCA ACC CAT CCT ACC CAC C - 3' (SEQ ID NO:43); and full-length complements thereof.

17. (Currently Amended) A method for identifying a beta-lactamase in a clinical sample, the method comprising:

providing a pair of oligonucleotide primers specific for nucleic acid ~~characteristic of encoding the an~~ OXA family ~~[[of]]~~ beta-lactamase enzyme~~[[s]]~~, wherein the enzyme is found in a Gram-negative bacterium selected from the group of *Enterbacter cloacae*, *Citrobacter freundii*, *Serratia marcescens*, *Escherichia coli*, *Providencia spp.*, *Proteus mirabilis*, *Yersinia enterocolitica*, and combinations thereof, excluding OXA-1, wherein one primer of the pair is complementary to at least a portion of the beta-lactamase nucleic acid in the sense strand and the other primer of each ~~the~~ pair is complementary to at least a portion of the beta-lactamase nucleic acid in the antisense strand;

annealing the primers to the beta-lactamase nucleic acid;

simultaneously extending the annealed primers from a 3' terminus of each primer to synthesize an extension product that is complementary to the nucleic acid strands annealed to each primer wherein each extension product after separation from the beta-lactamase nucleic acid serves as a template for the synthesis of an extension product ~~for the other primer of each pair using a primer that is complementary to each extension product.~~

separating the amplified products; and

analyzing the separated amplified products for a region characteristic of a beta-lactamase found in a Gram-negative bacterium selected from the group consisting of *Enterbacter cloacae*, *Citrobacter freundii*, *Serratia marcescens*, *Escherichia coli*, *Providencia spp.*, *Proteus mirabilis*, *Yersinia enterocolitica*, and combinations thereof.

18-38. (Canceled)

Amendment and Response under 37 CFR §1.116

39. (Currently Amended) The method of claim 17 wherein the primers are specific for nucleic acid ~~characteristic of~~encoding the OXA-9 beta-lactamase enzyme.
40. (Previously presented) The method of claim 39 wherein the primers are selected from the group of:
5' - CGT CGC TCA CCA TAT CTC CC - 3' (SEQ ID NO:34);
5' - CCT CTC GTG CTT TAG ACC CG - 3' (SEQ ID NO:35); and full-length complements thereof.
41. (Currently Amended) The method of claim 17 wherein the primers are specific for nucleic acid ~~characteristic of~~encoding the OXA-12 beta-lactamase enzyme.
42. (Previously presented) The method of claim 41 wherein the primers are selected from the group of:
5' - CGC TGG GAA ACC TAT TCG G - 3' (SEQ ID NO:36);
5' - CTG CCA TCC AGT TTC TTC GGG - 3' (SEQ ID NO:37); and full-length complements thereof.
43. (Currently Amended) The method of claim 17 wherein the primers are specific for nucleic acid ~~characteristic of~~encoding the OXA-5, 6, 7, 10, 11, 13, and 14 beta-lactamase enzymes.
44. (Previously presented) The method of claim 43 wherein the primers are selected from the group of:
5' - GGT GGC ATT GAC AAA TTC TGG - 3' (SEQ ID NO:38);
5' - CCC ACC ATG CGA CAC CAG - 3' (SEQ ID NO:39); and full-length complements thereof.

45-46. (Canceled)

47. (Currently Amended) The method of claim 17 wherein the primers are specific for nucleic acid ~~characteristic of~~encoding the OXA-2, 3, and 15 beta-lactamase enzymes.

48. (Previously presented) The method of claim 47 wherein the primers are selected from the group of:

5' - AGG CAC GAT AGT TGT GGC AGA C - 3' (SEQ ID NO:42);

5' - CAC TCA ACC CAT CCT ACC CAC C - 3' (SEQ ID NO:43); and full-length complements thereof.

49. (Currently Amended) A diagnostic kit for detecting an OXA family beta-lactamase which comprises packaging, containing, separately packaged:

(a) at least one primer pair capable of hybridizing to beta-lactamase nucleic acid of interest ~~characteristic of~~encoding an OXA family beta-lactamase enzyme, wherein the enzyme is found in a Gram-negative bacterium selected from the group of *Enterbacter cloacae*, *Citrobacter freundii*, *Serratia marcescens*, *Escherichia coli*, *Providencia spp.*, *Proteus mirabilis*, *Yersinia enterocolitica*, and combinations thereof, excluding OXA-1;

(b) a positive and negative control; and

(c) a protocol for identification of the beta-lactamase nucleic acid of interest.

51. (Previously presented) A diagnostic kit for detecting an OXA family beta-lactamase which comprises packaging, containing, separately packaged:

(a) at least one primer pair capable of hybridizing to beta-lactamase nucleic acid of interest;

(b) a positive and negative control; and

(c) a protocol for identification of the beta-lactamase nucleic acid of interest;

wherein the primers are selected from the group consisting

separating the amplified products; and
analyzing the separated amplified products for a region characteristic of the beta-lactamase;

wherein when the oligonucleotide primers are specific for the OXA family beta-lactamase enzyme designated as OXA-1, the primers are selected from the group of:

5' - TGT GCA ACG CAA ATG GCA C - 3' (SEQ ID NO:40);

5' - CGA CCC CAA GTT TCC TGT AAG TG - 3' (SEQ ID NO:41); and full-length complements thereof;

wherein when the oligonucleotide primers are specific for the OXA family beta-lactamase enzymes designated as OXA-5, 6, 7, 10, 11, 13, or 14, the primers are selected from the group of:

5' - GGT GGC ATT GAC AAA TTC TGG - 3' (SEQ ID NO:38);

5' - CCC ACC ATG CGA CAC CAG - 3' (SEQ ID NO:39); and full-length complements thereof;

wherein when the oligonucleotide primers are specific for the OXA family beta-lactamase enzyme designated as OXA-9, the primers are selected from the group of:

5' - CGT CGC TCA CCA TAT CTC CC - 3' (SEQ ID NO:34);

5' - CCT CTC GTG CTT TAG ACC CG - 3' (SEQ ID NO:35); and full-length complements thereof;

wherein when the oligonucleotide primers are specific for the OXA family beta-lactamase enzyme designated as OXA-12, the primers are selected from the group of:

5' - CGC TGG GAA ACC TAT TCG G - 3' (SEQ ID NO:36);

5' - CTG CCA TCC AGT TTC TTC GGG - 3' (SEQ ID NO:37); and full-length complements thereof;

and wherein when the oligonucleotide primers are specific for the OXA family beta-lactamase enzyme designated as OXA-2, 3, or 15, the primers are selected from the group of:

5' - AGG CAC GAT AGT TGT GGC AGA C - 3' (SEQ ID NO:42);

5' - CAC TCA ACC CAT CCT ACC CAC C - 3' (SEQ ID NO:43); and full-length complements thereof.

54. (Currently Amended) A method for identifying a beta-lactamase in a clinical sample, the method comprising:

providing a pair of oligonucleotide primers specific for nucleic acid characteristics of ~~encoding the~~ OXA family ~~[[of]]~~ beta-lactamase enzyme~~[[s]]~~, wherein the enzyme is found in a Gram-negative bacterium selected from the group of *Enterbacter cloacae*, *Citrobacter freundii*, *Serratia marcescens*, *Providencia spp.*, *Proteus mirabilis*, *Yersinia enterocolitica*, and combinations thereof, wherein one primer of the pair is complementary to at least a portion of the beta-lactamase nucleic acid in the sense strand and the other primer of ~~each~~ the pair is complementary to at least a portion of the beta-lactamase nucleic acid in the antisense strand;

annealing the primers to the beta-lactamase nucleic acid;

simultaneously extending the annealed primers from a 3' terminus of each primer to synthesize an extension product that is complementary to the nucleic acid strands annealed to each primer wherein each extension product after separation from the beta-lactamase nucleic acid serves as a template for the synthesis of an extension product for the other primer of ~~each pair~~ using a primer that is complementary to each extension product;

separating the amplified products; and

analyzing the separated amplified products for a region characteristic of a beta-lactamase found in a Gram-negative bacterium selected from the group consisting of *Enterbacter cloacae*, *Citrobacter freundii*, *Serratia marcescens*, *Providencia spp.*, *Proteus mirabilis*, *Yersinia enterocolitica*, and combinations thereof.
